# ***EasyCare Medium Semi-Electric Safety Bed Features***

**Semi-Electric Articulating Foundation** – allows both the upper body and the legs to be elevated independently of each other. The articulating frame has a long proven track record of being very reliable. It will support up to 300 lbs and is quiet and smooth functioning. It has a wired remote control that can be positioned safely outside the bed.

**Track system** – the track system is a completely contained system with no removable parts. The rail slides easily up and down the track, keeping the caregiver directly in front of the bed.

**Rail track** – is made of ultra high tech polyethylene. It is lightweight, self-lubricating, shatter resistant, abrasion/corrosion resistant, and long wearing. It is clean/non-toxic FDA/USDA accepted and maintenance free.

**Self-locking rails** – in the up position the rail drops into a self-locking notch in the track. To unlock the rail simply lift up and back to release the rail back into the track system.

**Closed rails** - there are three acrylic windows in the closed rail. The acrylic is ten times stronger than glass, providing excellent durability. The closed rail eliminates issues of entrapment and hazards posed by open rails, while providing high visibility both in and outside of the bed.

**32" mattress to floor height** – with the rail in the down position below the mattress, the 32" mattress to floor height allows the caregiver to provide needed care of lifting, turning, changing of clothing, etc. where the lower bed may not provide the proper positioning to perform these duties.

**EasyCare twin mattress** – EasyCare mattresses are custom-made pressure-relieving foam mattresses. They are anti-bacterial and fire retardant. The mattress is custom fit reducing entrapment issues by fitting tightly inside the bed frame.

**Design** – All four sides of the bed extend above and below the mattress reducing Entrapment issues. EasyCare Beds are handcrafted fine furniture made with beautiful clear finished wood, enhancing the home environment.
