

EasyCare Safety Beds

All models are offered in cherry, maple, or red oak and hand finished with clear coat.

Patented self locking track system is completely contained with no removable parts. This allows the caregiver to always stay directly in front of the bed.

Rails and front panel are made of solid hardwood for the look of fine furniture while adding strength and durability.

Acrylic panels are 10 times stronger than glass and allow high visibility.

There are no visible bolts, screws or seams on the inside of the bed or top of the rails eliminating focal points.

Pressure relieving medical grade mattress is twin or twin long so standard sheets may be used.

EasyCare Safety Beds meet or exceed the FDA 7 zones of entrapment. As shown below there is no room to burrow or create an issue of entrapment.
